

## How to delete custom taxonomy terms in plugin's uninstall.php?

---

July 8, 2015 By [wphelper](#)<sup>[1]</sup> [Leave a Comment](#)

I am writing my plugin's uninstall.php file and would like it to delete any terms that were created in the plugin's custom taxonomy.

In the plugin's uninstall.php file I am using this:

```
// Delete all custom terms for this taxonomy
$terms = get_terms('custom_taxonomy');
foreach ($terms as $term) {
    wp_delete_term( $term->ID, 'custom_taxonomy' );
}
```

The problem seems to be that the custom taxonomy isn't registered at this point, so `get_terms` returns an error for "invalid taxonomy", thus I can't delete the custom terms in this manner, which seems the most straightforward way to do so.

If the custom taxonomy isn't registered when `uninstall.php` is called, how can I have it so that my plugin is able to clean up it's custom data?

Any help is greatly appreciated.

Thanks.

Using the `uninstall` hook would be legitimate *if it worked*, but it dumps the same error as the `uninstall` file. It would have more chances of working as it loads the main plugin file to perform the `uninstall` function, but if the taxonomy is not registered anymore (and it is not, as we need to deactivate before uninstalling), WP cannot use `get_terms`.

Adapting the following function from this [Stack Overflow answer](#)<sup>[2]</sup> should do the work:

```
function load_terms($taxonomy){
    global $wpdb;
    $query = 'SELECT DISTINCT
                t.name
            FROM
                `wp-clr`.wp_terms t
            INNER JOIN
                `wp-clr`.wp_term_taxonomy tax
            ON
                `tax`.term_id = `t`.term_id
            WHERE
                ( `tax`.taxonomy = \'\' . $taxonomy . \'\' );'
    $result = $wpdb->get_results($query , ARRAY_A);
    return $result;
}
```

Based on input from [brasofilo](#), here is what I ended up doing:

```
function delete_custom_terms($taxonomy){
```

```

global $wpdb;

$query = 'SELECT t.name, t.term_id
        FROM ' . $wpdb->terms . ' AS t
        INNER JOIN ' . $wpdb->term_taxonomy . ' AS tt
        ON t.term_id = tt.term_id
        WHERE tt.taxonomy = "' . $taxonomy . '"';

$terms = $wpdb->get_results($query);

foreach ($terms as $term) {
    wp_delete_term( $term->term_id, $taxonomy );
}

// Delete all custom terms for this taxonomy
delete_custom_terms(LISTING_TAXONOMY);

```

Call your cleaning function when uninstalling your plugin through `register_uninstall_hook`<sup>[3]</sup>

Source : Stackover<sup>[4]</sup>

## Answer

Using the uninstall hook would be legitimate *if it worked*, but it dumps the same error as the uninstall file. It would have more chances of working as it loads the main plugin file to perform the uninstall function, but if the taxonomy is not registered anymore (and it is not, as we need to deactivate before uninstalling), WP cannot use `get_terms`.

Adapting the following function from this Stack Overflow answer<sup>[5]</sup> should do the work:

```

function load_terms($taxonomy){
    global $wpdb;
    $query = 'SELECT DISTINCT
                t.name
            FROM
                `wp-cl`s`.wp_terms t
            INNER JOIN
                `wp-cl`s`.wp_term_taxonomy tax
            ON
                `tax`.term_id = `t`.term_id
            WHERE
                ( `tax`.taxonomy = \'' . $taxonomy . '\')';
    $result = $wpdb->get_results($query , ARRAY_A);
    return $result;
}

```

Based on input from brasofilo, here is what I ended up doing:

```

function delete_custom_terms($taxonomy){
    global $wpdb;

```

```
$query = 'SELECT t.name, t.term_id
FROM ' . $wpdb->terms . ' AS t
INNER JOIN ' . $wpdb->term_taxonomy . ' AS tt
ON t.term_id = tt.term_id
WHERE tt.taxonomy = "' . $taxonomy . '"';

$terms = $wpdb->get_results($query);

foreach ($terms as $term) {
    wp_delete_term( $term->term_id, $taxonomy );
}
```

```
// Delete all custom terms for this taxonomy
delete_custom_terms(LISTING_TAXONOMY);
```

Call your cleaning function when uninstalling your plugin through `register_uninstall_hook`<sup>[6]</sup>

## Permalink opens attachment instead of page<sup>[12]</sup>

I recently moved a blog from one host to another and now have a problem with a permalink – rather than opening up a page, it now opens an attachment. The blog is using WP 3.0.4, running on PHP 5 and IIS 7.0. The permalinks are set to use “/%postname%” and the web.config is as [...]

## Permalink Problems<sup>[13]</sup>

I am having a problem. I am running WP 3.05 with one custom taxonomy. Here is the code to create the taxonomy:

```
function create_property_taxonomies() { // Add new taxonomy, make it hierarchical (like categories)
$labels = array( 'name' => _x( 'Property Types', 'taxonomy general name' ), 'singular_name' => _x( 'Property Type', 'taxonomy singular name' ), [...]
```

## WordPress.com vs WordPress.org<sup>[14]</sup>

This question might seem a little silly but I was wondering what is the differences between WP.com and WP.org? I know the main differences like you can't edit a them file without paying for it, you might get some ads and you get a youname.wordpress.com domain but what are the little features that make the [...]

## Get the post children count of a post<sup>[15]</sup>

Is there a fast way to get the count (number) of post children of a certain post? (The post has a custom post type) I don't want to use WP\_Query for this because I don't need all the extra data... LE: based on wyrfel's answer I ended up using:

```
function reply_count($topic, $type = 'topic-reply'){ global [...]
```

## Comments RSS Feed showing repeating title<sup>[16]</sup>

functions.php I added a filter in the functions.php file to grab the do\_feed\_rss2 and the do\_feed\_atom with my own RSS function with just a simple a simple text replacement “Answers” instead of “Comments”. I'm definitely not trying to use

stacks as my own debugger, please let me know if that's how this comes across, just [...]

### **show if comment is in moderation<sup>[17]</sup>**

How to display a moderation-message with a comment after posting a comment. The workflow should be: post a comment wp thinks this one has to be moderated user sees his comment with a messe like "thx but you cannot see it since its in moderation" stretchgoal: this message should be visible every time the users [...]

### **What are some good Apache settings to use with wordpress?<sup>[18]</sup>**

My server has 756m of RAM. Every few days I get [error] server reached MaxClients setting, consider raising the MaxClients setting Just to break cycle of "doesn't belong here". WordPress basically has no specific requirements for web server itself (which doesn't even have to be Apache), aside from permalinks. The message you are getting seems [...]

### **How to Reduce the Maximum Upload File Size?<sup>[19]</sup>**

In my website there are many authors who can publish posts but some of them are uploading images bigger than 1M , and I want to reduce the max upload size to 500 kb. You can forbid uploads of a specific size (or for other reasons) in the wp\_handle\_upload\_prefilter hook that is used in the [...]

I am new to WordPress and need help. I am currently working on the site <http://ecentriconline.com/surferbeachfront>. On this page, I want to display the left hand side as a widget. Right now, the left hand side is coded in the index.php page. Please let me know the steps that I need to do to achive [...]

### **add\_meta\_box() to Category Edit Screen?<sup>[21]</sup>**

I've got a plugin that attaches itself to both the post and page editors to read and write to the post\_content object. I'd like to also attach my plugin to the category manager edit screen. In the code below, lines 1 and 2 attach it to the post and page editor, but line 3, a [...]

### **404 Error on form submission within custom post type<sup>[22]</sup>**

I'm trying to create a forum system using WP's custom post types – two post types as Topic/Reply and a Forum taxonomy. I have created a singular template for the topic post type, in which I added a reply form. The problem is that when I submit the form I get a 404 page. This [...]

### **Is There a WordPress Hook to Filter the Edit Posts View?<sup>[23]</sup>**

I want to be able to customize the WordPress edit posts screen to filter based on a custom field (or whatever). Unfortunately I'm not sure what filter or hook to use here, and instead of opening the code myself, figured I'd throw the question out here. Just to be clear, I'm talking about this screen. [...]

### **How do I rewrite a url to use %taxonomy% instead of %category% when multiple taxonomies are present?<sup>[24]</sup>**

I would like to have the option to use taxonomy in the url instead of only having category like "uncategorized." Note that I have multiple taxonomies (countries, states etc), some of which have thousands of terms (if that even matters). Edit: I failed to mention that this is an offshoot of another question: Pros and [...]

## **is\_plugin\_active function doesn't exist<sup>[25]</sup>**

I'm using WordPress 3.0.5 and have tested with 3.1rc4. In the main PHP file of my plugin, when I try to call `is_plugin_active` I get Call to undefined function `is_plugin_active()`. I can call `add_action` and `add_filter`. What should I check/change to fix this? This is happening inside of the admin on the Plugins page. At [...]

## **Git beginner: Keeping track of on-server changes<sup>[26]</sup>**

So I'm starting to get to grips with Git (never used any VCS before). Some Git users tell me to only push to production server and never pull from it to my local dev server. That leaves me with this scenario. I run WordPress 3.0 in a Multi Site environment. On the production server, I [...]

## **List Category Posts plugin upgrade fails with fatal error<sup>[27]</sup>**

I just tried an automatic upgrade of List Category Posts plugin to version 0.17.2 on WordPress 3.0.5. I think I had 0.17.1 before. It installed but failed to activate: Plugin could not be activated because it triggered a fatal error. Parse error: syntax error, unexpected T\_STRING, expecting T\_OLD\_FUNCTION or T\_FUNCTION or T\_VAR or '}' in [...]

## **How to make the post summary taller?<sup>[28]</sup>**

right now our posts on the landing page are only showing 2 lines of the content. How can I get the posts to show 5 lines of the content each? You can either manually enter content into the `_excerpt` section or use this code in your `functions.php` file in your theme `function custom_excerpt_length( $length ) { [...]`

## **Switching themes without losing widgets?<sup>[29]</sup>**

The other day, I switched from 2010 default them to Semiologic, then back. When back to the 2010, all my appearance/widgets had gone back to the default. Does this often happen? What is the best practice? Should I always do a database backup before trying new themes, then restore if I don't like it? Or [...]

## **use query\_posts to return a post OR a page by ID<sup>[30]</sup>**

I'm building a custom homepage for a client where they want to have a few changeable boxes to link to specific pages, or posts, within the site. I've added custom fields to the homepage so that they need only enter the page/post ID, and then it will display the proper post or page. And I'd [...]

## **How to find if a post with custom\_field == X exists?<sup>[31]</sup>**

I need to find if a post with a custom field X equal to Y exists in a wordpress installation. Should I do it with a simple sql query or is there something build in that can help me achieve it? You can use the `WP_Query()`; to check that like this: `$my_query = new WP_Query(); [...]`

## **Link Attachment Image to Category<sup>[32]</sup>**

How do you link an attachment image to its category? `function wp_attachment_image($size = thumb) { if($images = get_children(array( 'post_parent' => get_the_ID(), 'post_type' => 'attachment', 'numberposts' => -1, // show all 'post_status' => null, 'post_mime_type' => 'image', ))) { foreach($images as $image) { $attimg = wp_get_attachment_image($image->ID,$size); $atturl = wp_get_attachment_url($image->ID); $attlink = get_attachment_link($image->ID); $postlink = get_permalink($image->post_parent); $atttitle [...]`

## Guest authors, sort of like Wikipedia, but more theme-able<sup>[33]</sup>

My first post on WordPress SE. I'm bouncing around an idea of a new site. I want to allow for guest editing like wikipedia that someone can create articles if it doesn't exist already, existing articles can be edited, articles have edited history with IP address, allows for uploading of pictures from guest authors. Can [...]

## WordPress CMS – hide content from public while in editing stages<sup>[34]</sup>

I'm setting up a simple web site for a member of my family, using wordpress as a CMS. I've already registered a domain name and I'm about to set up wordpress. I want them to be able to edit the site content online (using wordpress's admin interface) and view the site, but I don't want [...]

## Facebook fanbox problem<sup>[35]</sup>

I have added Facebook fanbox to my site but it causes performance problems. Is there a plugin that embeds the fanbox and loads the javascript in the footer and asynchronously (if possible)? If not, can I do it manually somehow? I want to load the js file from the footer but the fanbox to appear [...]

## How to split a loop into multiple columns<sup>[36]</sup>

If I have a loop running from a category query like : `<?php $the_query = new WP_Query('cat=1&showposts=50&orderby=title&order=asc');?>` `<ul>` `<?php while ($the_query->have_posts()) : $the_query->the_post();?>` `<li>..` `</li>` `<?php wp_reset_query();?>` `<?php endwhile;?>` `</ul>` How would I create an if clause that breaks the list at a certain interval, and starts a new one. So for example at [...]

## Troubles about insering a POST with a SQL query, post\_status<sup>[37]</sup>

I 'm using wordpress 3.0.5 I have to use sql for create post, here is my SQL query: `$req = $bdd->prepare('INSERT INTO wp_posts (post_title,post_content,post_name,post_date,post_date_gmt,post_modified,post_modified_gmt,post_author,post_status,post_type) VALUES (:post_title, :content, :post_name, now(), now(), now(), now(), 1 ,\'publish\', :post_type)');` Everything is fine, my post is created as I want, BUT when I edit my post in admin, for exemple [...]

## Output loop to function return?<sup>[38]</sup>

I'm working on a shortcode function that returns a category image, a link to the category, the last three posts in that category, and another link to the category. See my code below: `add_shortcode('caticons_listing','bm_caticons_listing');` `function bm_caticons_listing($atts) { extract( shortcode_atts( array( 'include' => '', 'exclude' => '', 'small' => 'true' ), $atts )); if ($atts['include']) [...]`

## How to Prevent WordPress to encode html in post?<sup>[39]</sup>

As as title, how to prevent wp not to encode html in a post? currently i just need to prevent ' & ' changed to & The result need to be looks like on editor with html tab mode selected. `$content = $wpdb->get_row("SELECT post_content FROM $wpdb->posts WHERE ID=xxx");` `$content = str_replace('amp;', '', $content->post_content);` `//remove amp;` `$wpdb->query("UPDATE $wpdb->posts SET post_content = [...]`

## Child pages don't become submenus (as in the twenty-ten theme)?<sup>[40]</sup>

I'm using the theme Starkers which is based on twentyten. My twenty ten theme do place child pages below its parent page. But the new theme (based on Starkers) I'm developing doesn't (it just place it in the first level). My theme header.php: `<div`

```
id="access" role="navigation"> <?php wp_nav_menu( array( 'container_class' => 'menu-header', 'theme_location' => 'primary' [...]
```

## How to implement pagination eg. newer – 3 – 4 – 5 – 6 – 7 – older<sup>[41]</sup>

How can I implement pagination like shown in the title perhaps something similar to most sites I can across this awesome tutorial just the other day: <http://design.sparklette.net/teaches/how-to-add-wordpress-pagination-without-a-plugin/> which is a modified version of this one: <http://www.kriesi.at/archives/how-to-build-a-wordpress-post-pagination-without-plugin> You can use WP-PageNavi <http://wordpress.org/extend/plugins/wp-pagenavi/> I had the exact same problem. Here are 2 solutions, were the first needs [...]

## How to change the WordPress favicon?<sup>[42]</sup>

I'm looking for a way to change the WordPress favicon. Any hints how to do this? You should add it on your theme's header.php file with this code (W3C standard code): `<link rel="icon" type="image/png" href="http://yourblog.com/favicon.png">` For a little bit interoperability, consider using the Microsoft Icon format. Just place a file called favicon.ico with your icon [...]

## free form wordpress<sup>[43]</sup>

My question is kind of simple: I have a voucher. I would like to people fill an form on my WordPress site and when they click submit, they receive an e-mail with the voucher... Is there a plugin out there for that? If there is not, how could I accomplish this? you can do that [...]

## How to get the post id from a permalink?<sup>[44]</sup>

How can I get the post id from a permalink like "http://localhost/wordpress/animals/cat" in functions.php, I have tried `url_to_postid()` and `get_page_by_path()` but none seem to work. Hi @Tirithen: Have you tried (which assumes your custom post type is 'animal' and not 'animals'): `$post = get_page_by_path('cat', OBJECT, 'animal');` Source : Stackover Answer Hi @Tirithen: Have you tried (which assumes your [...]

## Selecting New & Edit Page for Custom Post Types<sup>[45]</sup>

I'm probably missing something unless it's really not possible, for some reason I can't get my function to only execute on the new and edit page of a custom post type (the new not being a problem): I'm currently using: if `((isset($_GET['post_type']) && $_GET['post_type'] == 'events') || (isset($post_type) && $post_type == 'tf_events')) { add_action('admin_init', "admin_head"); [...]`

## Janrain/Simple Modal under Redirected Domain<sup>[46]</sup>

I have a wordpress site running on one domain that has the main 'client' domain for the site redirecting to it. I've got my WordPress Address/Site Address entered correcting in WordPress, and the .htaccess is formatted properly afaik. Everything else seems to work properly other than this issue. So I have Janrain Engage, SimpleModal Jainrain [...]

## Making custom field's 'Name' available in the dropdown list by default in a theme?<sup>[47]</sup>

My single.php file has the following code: `<?php // Set and display custom field $intro_image = get_post_meta($post->ID, 'Intro Image', true); ?> <div class="block-1">  </div> <?php ?>` The user will have to type Intro Image (once) in the 'Name' field in order to see it next time in the [...]

## want to stop stripping out from my post content<sup>[48]</sup>

I have installed wordpress for my site. I am trying to insert posts using function `wp_insert_post()` from my self-made script. content of my post contains video-embed code of google. `<object width="480" height="385"><param name="movie" value="http://www.youtube.com/v/-T9omX2XD2s?fs=1&hl=en_US"></param><param name="allowFullScreen" value="true"></param><param name="allowscriptaccess" value="always"></param><embed src="http://www.youtube.com/v/-T9omX2XD2s?fs=1&hl=en_US" type="application/x-shockwave-flash" allowscriptaccess="always" allowfullscreen="true" width="480" height="385"></embed></object>` when I am running script to insert this content in my [...]

## LaTeX MarkUp – align equations<sup>[49]</sup>

I'm very elated by the fact that it has LaTeX support. I would like to know whether the `\begin{align} \end{align}` environment could be used, because it looks very good since the equations are aligned. If not how can i make this LaTeX command look better? `\begin{align*} \int \frac{1}{(2x^2+4x-2)^{-\frac{3}{2}}} \, dx &= \frac{\sqrt{2}}{8} \int \frac{1}{\sec t} \, dt \cdot \tan t \, \tan^3 t \, dt \, \dots`

## Am I using get\_posts wrong?<sup>[50]</sup>

I have `<?php $folioPosts = get_posts(array('category_name' => 'portfolio', 'numberposts' => 3)); if ($folioPosts->have_posts()) : foreach ($folioPosts as $folioPost) : setup_postdata($folioPost); ?> <article class="col3"> <?php if (has_post_thumbnail()) : ?> <p><a href="<?php the_permalink() ?>"><?php the_post_thumbnail() ?></a></p> <?php endif; ?> <p><a href="<?php the_permalink() ?>"><?php the_title() ?></a></p> </article> <?php endforeach; else : ?> <p>No folio posts to display ...</p> [...]`

## How to cleanly delete attachment but retain original file?<sup>[51]</sup>

`wp_delete_attachment()` is very comprehensive and wipes every trace of attachment from database and disk. Is there easy way to keep original file? Forking under another name is not an option, because other functions like `wp_delete_post()` will still call original version. Year and some later with much improved skills, behold:  
Keep\_Deleted\_Attachment\_File::on\_load(); /\*\* \* Keep original file [...]

## Mathematical operations on custom field values? (updated)<sup>[69]</sup>

I'm attempting to write a function, run by a cron schedule at midnight every night, that will subtract 1 from the integer value of a custom field. It will function basically as a countdown timer for 30 days. The problem is, it isn't working, and I've

hit a wall / I'm stumped. The value of [...]

## Two plugins sharing the same custom post type registration<sup>[70]</sup>

I have two plugins Plugin A and Plugin B registering the same post type exp, aws\_employee. Each plugin offers different functionality but the post type type they share is exactly the same. If I activate plugin A first and then Plugin B, Plugin B does not activate since Plugin B tries to register the same [...]

## Sort users by "birthday" using WP\_User\_Query<sup>[71]</sup>

I have created user meta that holds user birthday (birthday). birthday is date field. Now i am trying to figure how to sort (get) all users that have birthday based on specific month. I have created drop menu that holds all the months. function users\_months\_dropdown() { ?> <select name="month" id="month" onchange="" size="1"> <option value="01">January</option> <option [...]

## How should I use wpdb class to submit a form in admin dashboard?<sup>[72]</sup>

I want to create a plugin for the admin to write his everyday message in the dashboard & display it on his website. I have two files, dailymessage.php and messageform.php. In dailymessage.php I have this code: add\_action( 'admin\_menu', 'getMessage' ); function getMessage() { add\_options\_page( "DailyMessage", "DailyMessage", 1, "DailyMessage", "messageForm" ); } function messageForm() { include('messageForm.php' [...]

I recently moved a blog from one host to another and now have a problem with a permalink – rather than opening up a page, it now opens an attachment. The blog is using WP 3.0.4, running on PHP 5 and IIS 7.0. The permalinks are set to use "%postname%" and the web.config is as [...]
